Individual coursework (CNENG506)
- Lab work Reflection

Objective

The objective is to reflect on the four Lab works that you have actively participated in during the Intelligent System Control module and identify the learning you have constructed from them. Your reflection should discuss the themes and ideas that have emerged from the lab work and identify the value that you will take from them when applied in your context.

Reflective writing is:

- documenting your response to experiences, opinions, events or new information
- communicating your response to thoughts and feelings
- a way of exploring your learning
- an opportunity to gain self-knowledge
- a way to achieve clarity and better understanding of what you are learning
- a chance to develop and reinforce writing skills
- a way of making meaning out of what you study

You may find it useful to read the information on reflective writing that the University of New South Wales has published on their website.

Requirements

An individually written 1000-word reflection (+/-10%).

Please include a final word count at the end of your written reflection. Note that the word limit does not include references or titles.

Marking criteria

Criteria	Maximum mark
Written reflection (How did the Lab work make you feel? What did you learn from the lab work that you will take forward into your future professional career?)	70%
Formatting including references (Was it logically structured, readable and well presented, including references as appropriate?)	30%

A full mark scheme including grade descriptors is available in Appendix A and it is highly recommended that you utilise this to direct your approach.

Submission deadline: 18-11-2025

Course convenor: Dr. Muhammad Abrar

Descriptor	Excellent	Good	Satisfactory	Weak pass	Fail	Weight
	A	**B**	**C**	**D**	**F1**	
	85-100	**78-84**	**68-77**	**60-67**	**<60**	
Written reflection	Excellent reflection on learning constructed from the lab work and application to individual context; excellent use of module studies references to support knowledge construction.	Reflective piece well-constructed; links made with relevant studies encountered, evidencing a good grasp of the key themes and learning applied to individual context.	Adequate reflection and referencing of lab work; a satisfactory level of knowledge construction evident in the application to individual context.	Barely adequate reflection; rather superficial account of the lab work and key themes; limited application to individual context.	Very little evidence of lab work participation, with little or no reflection or constructed knowledge; no reference to module studies; no application to individual context.	0.7
Format and structure	An excellent reflective piece produced to a near-professional standard; references are correctly formatted; in compliance with the required length.	A good reflective piece, with very minor grammatical/typographic errors; good structure; references are correctly formatted; broadly in compliance with the required length.	Reflective writing follows the guidance, but there is a poor balance between too much and too little detail. Some errors in formatting the references. Minor deviance from the required length.	Reflective piece lacks clarity through either a poor level of technical English, and/or poor formatting, including references. Deviance from the required length.	Little consideration of the guidance, making for a disorganised/ difficult to read reflection, containing numerous grammatical and typographic errors. Deviance from the required length.	0.3
