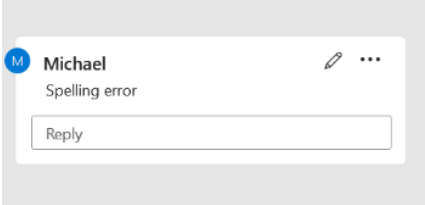
EVALUATION OF A PARAGRAPH

1. GRAMMAR/LEXIS

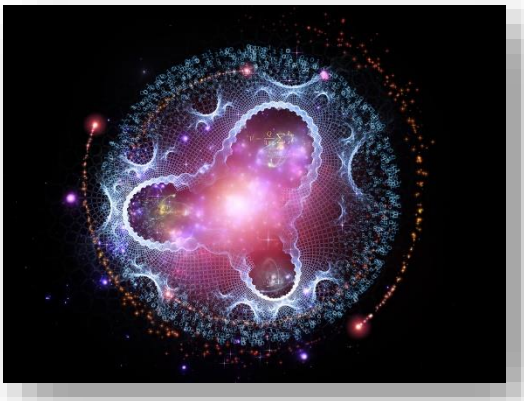
Try to find some lexical/grammatical errors in the paragraph below. You should indicate which type of error has been made in the paragraph using comments and track changes. You may wish to use the symbols or abbreviations in the table below. Here is an example of a comment:

It is esential to gain a high-level degree…



TYPES OF ERROR	
ww = wrong word	prep = wrong preposition
number = word should be singular or plural?	art = article should be changed or deleted
tense = wrong tense	vf = wrong form of verb
p = wrong punctuation	wf = wrong form of word
informal = informal word used	^ = word missing
/ = unnecessary word	sp = wrong spelling
wo = wrong word order	**?** = meaning unclear
cs = comma splice (run-on sentence)	c = these words do not collocate
sf = sentence fragment	**?** = meaning unclear

Extract from Seven Brief Lessons on Physics (Carlo Rovelli)



In the second and third decade of the twentieth century it was the Dane, Niels Bohr, who pioneers the growth of quantum theory. It was Bohr who understands that energy of electrons in atoms can only take on certain values, such as the energy of light, and crucial, that electrons can only 'jump' between one atom orbit and other with fixed energies, emitting or absorb a photon when they jump. These the famous 'quantum leaps'. In his institute in Copenhagen, the most fantastic young minds of the century gathered with each other to investigate and try to bring order to these bafling aspects of behaviour in the atomic world, and to get from it a coherent theory. In 1925 the equations of quantum theory final appeared, replacing the entire mechanic of newton.
